

MARK RAINIER LOPEZ

Bagumbayan Bulakan, Bulacan • rainierlopez63@gmail.com • +63 961 368 7472

SUMMARY

A proactive and highly motivated Computer Engineer with a strong foundation in hardware and software systems. Skilled in programming, microcontroller-based projects, and system design. Passionate about developing innovative and efficient technological solutions with a focus on real-world applications such as IoT and automation. A fast learner with strong problem-solving abilities and a commitment to continuous improvement.

EXPERIENCE

Student Intern (IT Support) – Nexus Cloud IT Solutions, Ortigas, Pasig May 2025 – July 2025

- Managed email correspondence and client inquiries, ensuring organized communication and timely responses to support daily operations.
 - Coordinated schedules, meetings, and training sessions, helping maintain efficient workflow and proper time management.
 - Maintained accurate records and performed data entry for training materials, exam reviewers, and technical documentation to improve file organization and accessibility.
 - Developed digital training content, including videos, reviewers, and presentations using Camtasia and Canva, enhancing learning resources for trainees and clients.
 - Conducted technical and online research to support the improvement of IT training programs and certification materials.
 - Collaborated with team members during training events and technical sessions to ensure smooth execution and efficient operational support.
-

EDUCATION

Bachelor of Science in Computer Engineering

2022 - 2026

Bulacan State University - Meneses Campus

- Magna Cum Laude
 - Dean's Lister (2024 – 2025, 2025 – 2026)
-

PROJECTS

Smart Silong – IoT-Based Smart Clothing Rack System

- Developed an IoT-enabled automated clothing rack using ESP32, DHT11, YL-83 rain sensor, and MQ-135 air quality sensor to detect environmental changes and protect laundry from unexpected rainfall.
- Integrated the Blynk IoT platform and solar panel technology to enable real-time mobile monitoring, remote control, and energy-efficient system operation.
- Implemented automated response mechanisms that improved household laundry management, minimized water exposure, and enhanced user convenience through smart automation.

MARK RAINIER LOPEZ

Personal Profile Website (PHP-Based)

- Designed and developed a responsive personal portfolio website using PHP, HTML, CSS, and JavaScript to professionally showcase personal information, academic background, and projects.
- Integrated backend functionality and database management features to efficiently handle user data and website content.
- Optimized website accessibility and user experience through structured navigation and responsive interface design across multiple devices.

Miniature Traffic Light System with Working Signals

- Designed and assembled a miniature traffic management model using 555 timer IC and 7474 D-type flipflop to simulate real-world traffic signal operations.
- Implemented sequential timing circuits for automated red, yellow, and green signal transitions without relying solely on software-based programming.
- Demonstrated practical applications of digital electronics, sequential logic systems, and hardware-based automation through functional traffic signal control.

TECHNICAL SKILLS

- Programming Languages: Python, C, C++, JavaScript, Verilog
 - Web & Database: HTML, CSS, MySQL
 - Embedded Systems & Hardware: Arduino, ESP32, GSM Module, Sensor Integration, PCB design basics
 - Software & Development Tools: Arduino IDE, GitHub, Visual Studio Code, IntelliJ IDEA, MATLAB, XAMPP
 - Networking, Simulation & Design Tools: Cisco Packet Tracer, Tinkercad
 - Design & Productivity Tools: Canva, Figma, Microsoft Office Suite, AutoCAD
-

CERTIFICATES

- Introduction to Computer Systems Servicing - TESDA
- Installing and Configuring Computer Systems - TESDA
- Setting Up Computer Networks – TESDA
- Responsive Web Design - freecodecamp
